Personnel & Cargo Lift System

Protea personnel and cargo lifts ensure safe and reliable operations in a range of offshore applications. For example, the scissor lift pictured is for use on an offshore semi-submersible drilling rig and can safely lift 2 personnel and their equipment to a height of 13m. With an integral hydraulic system to operate the lift and drive system, this versatile tool has total lift capacity of 300kg and fully complies with all appropriate offshore design codes and regulations.

Protea also delivers a range of rig elevators - available with lift capacities up to 200kg, these proven elevators allow the safe transport of workers from ground level up to the rig floor.

For cargo only applications, Protea can deliver a range of vertical transport platforms. The unit shown has a lift capacity of 500kg and is used to transport cargo between decks on drilling rigs and FSO vessels.
